Summary

- The above figure shows the weekly cumulative volume of rainfall amounts each ward and/or sub-county in Nakuru County is forecasted to receive from Tuesday 18th to Monday 24th November 2025.
- Detailed forecast in the above Climatic Zone tables indicates that parts of the county is projected to receive average cumulative weekly rainfall of between 20mm and 30mm. Some parts will, however, receive less than 20mm cumulatively. Parts of Kuresoi and Naivasha sub counties will receive cumulative weekly rainfall of between 30mm and 50mm (refer to the legend for details).
- All the wards are projected to receive morning light rains as well as afternoon and night showers over few places. However, areas over large water bodies like lakes Naivasha and Nakuru (and their environs which includes the city) may experience some afternoon rainfall activities due to local climatological effects.
- Kindly refer to the above map and tables for details of projected weather outlook as well as weekly cumulative amounts of rainfall during the forecast period.

Commentary of county weather forecaster:

- Partly cloudy conditions with rains over few places in the morning hours.
- Showers and thunderstorms over few places in the afternoon/evening during the forecast period.
- Partly cloudy night conditions expected during the forecast period.

Advice to farmers from the Ministry & Department of Agriculture:

Highly consider to always consult your local agricultural extension officer for advice on how to plan farming activities in light of this forecast.
