KISII COUNTY: WEEKLY METEOROLOGICAL OUTLOOK AND AGROMETEOROLOGICAL ADVISORY

1. Meteorological Forecast

- **Precipitation Profile:** Convective activity characterized by **showers and thunderstorms** is anticipated across all three distinct rainfall zones. Peak intensity is expected during diurnal transitions (afternoon and evening) and nocturnal periods, specifically on Saturday.
- **Early Day Phenomena:** Light to moderate precipitation is projected during morning hours, with higher temporal probability on Friday and Saturday.

2. Thermal Conditions

- **Diurnal Maximums:** Daytime air temperatures are forecast to fluctuate between **21°C and 30°C**.
- **Nocturnal Minimums:** Nighttime values are expected to stabilize within a range of **12°C to 17°C**.

3. Sectoral Impact Advisories

- **Agro-meteorology:** Stakeholders are urged to coordinate with the **Departments of Agriculture, Livestock, Fisheries, and Co-operative Development** to align crop and livestock management strategies with the current forecast.
- **Public Safety and Lightning Risk:** Due to the high probability of electrical storms, residents should avoid open terrain or seeking shelter under high-standing vegetation to mitigate **lightning strike hazards**.
- **Hydro-Hazard and Road Safety:** Significant risks of **flash flooding** exist; motorists must refrain from traversing flooded roads or bridges. Anticipate degraded traction (slippery/muddy conditions) on unpaved county roads; heightened vigilance is mandatory for all road users.
- **Infrastructure and Drainage:** Local authorities are advised to maintain and clear **drainage infrastructure** to optimize storm-water discharge and reduce the incidence of localized flooding in urban and low-lying areas.

Thank you.
