1.2 The Rainfall Forecast for February 2026

The forecast for February 2026 indicates that most parts of the County will experience generally sunny and dry conditions throughout the month. Occasional light rainfall is however likely to occur over the high ground areas in the Western and Southern Sector of the County. Temperatures are also likely to be warmer than average over several parts of the County.

1.3 The Outlook for The Next Three Months (February-March-April 2026)

Sunny and dry weather conditions are expected to dominate most parts of the County during February. However, a few areas in the Western and Southern sector may experience occasional light rainfall over high ground areas.

March is expected to mark the onset of the rainfall season over several parts of the County, while April is anticipated to represent the peak of the season, with more widespread and enhanced rainfall distribution. Temperatures are expected to be warmer than average over the whole country during the forecast period.

1.4 Rainfall Review for January 2026

Sunny and dry conditions prevailed over most parts of the County during the month, with temperatures higher than usual both during the day and night.

1.5 State of the Global Drivers during February 2026

The rainfall outlook for February 2026 is mainly based on empirical statistical models developed from the expected evolution of global Sea Surface Temperature (SST) anomalies and the Southern Oscillation Index (SOI). Currently, the Indian Ocean Dipole (IOD) is neutral and La Niña conditions are still present. On sub-seasonal timescales, the Madden–Julian Oscillation (MJO) may enter Phase 2 in early February and remain in generally favourable phases, although its weak amplitude is likely to limit its overall influence; nevertheless, some localized light rainfall enhancement, particularly over Western and Southern Sector of the County from the second week of February, is forecasted.

1.6 PART II: FURTHER ADVISORIES

SUMMARY ABOUT THE WEEKLY FORECAST:

Partly cloudy conditions in the morning, breaking into sunny intervals the rest of the day.

Maximum temperatures are expected to range from 28°C - 37°C, while minimum temperatures are expected to range from 15°C - 24°C. Strong north-easterly to south-easterly winds with speeds not exceeding 25 knots (12.86 m/s) are expected to persist in most parts of the County.

Community members advised to inculcate the culture of being “weather – ready”, “climate – smart” and “water – wise” as we navigate the unfamiliar and chaotic environment of a changing climate. This will help them adapt to a changing climate while at the same time mitigating the adverse effects of Climate Change and Variability, hence becoming more resilient to the vagaries of Climate Change.

In light of this weather forecast, farmers are also advised to consult with respective local extension officers from the County Ministry of Agriculture and Livestock at Ward and Sub-county level for more advice on the best farm practices.

KEY OF SCIENTIFIC WORDS USED

Rainfall categories	
Range	Category
<5 mm	Light
5 - 20mm	Moderate
20 - 50mm	Heavy
>50mm	Very heavy
Rainfall coverage	
Term	Meaning
Most Places	Between 66% and 100%
Several Places	Between 33% and 66%
Few Places	Below 33%
Note: 1 mm of rainfall is equivalent to 1 litre of rainfall per square meter.
