Marsabit Seven Day temperature forecast valid from 3rd to 9th March 2026

**7 WEEKLY MAXIMUM TEMPERATURE
FORECAST VALID 3 - 9 MARCH 2026**

**7 WEEKLY MINIMUM TEMPERATURE
FORECAST VALID 3 - 9 MARCH 2026**

Advisory

- Marsabit County is currently experiencing rainfall that has met the established onset threshold, marking the effective start of the season.
- This development has been driven by temporarily favourable atmospheric conditions that have enhanced precipitation across parts of the country.
- The early seasonal performance is linked to increased convective activity associated with the Madden–Julian Oscillation (MJO), a large-scale tropical system that propagates eastward and plays a significant role in modulating rainfall patterns.
- From late February to early March, the MJO remained in a favourable phase, strengthening moisture convergence and vertical air movement over the region.
- This resulted in intermittent rainfall occurring slightly earlier than the long-term climatological average for Marsabit County.

Advisory CONT...

- Forecast guidance indicates that from mid-March, the MJO is likely to shift into a less favourable phase, potentially leading to suppressed convection, reduced rainfall intensity, and a heightened likelihood of short dry spells.
- Nevertheless, current outlooks suggest that any interruption in rainfall may be brief, with showers expected to resume in line with the broader seasonal forecast.
- Farmers are therefore encouraged to take advantage of the prevailing soil moisture conditions and proceed with planting activities to optimise crop establishment and yield potential.
- Marsabit County locational specific forecasts are available from the County Directors of Meteorological Services, Marsabit Meteorological office .

THE END

THANK YOU ALL.
