

NOTE: Dry day <1mm. Light rains (1-5 mm). Moderate rains (5-20 mm). Heavy rains (20-50 mm). Very Heavy rains > 50 mm.

MAKUENI COUNTY WEEKLY WEATHER FORECAST SUMMARY

Period: April 07, 2026 – April 13, 2026

General Overview

The forecast indicates a **spatially diverse but generally favorable environment**, characterized by:

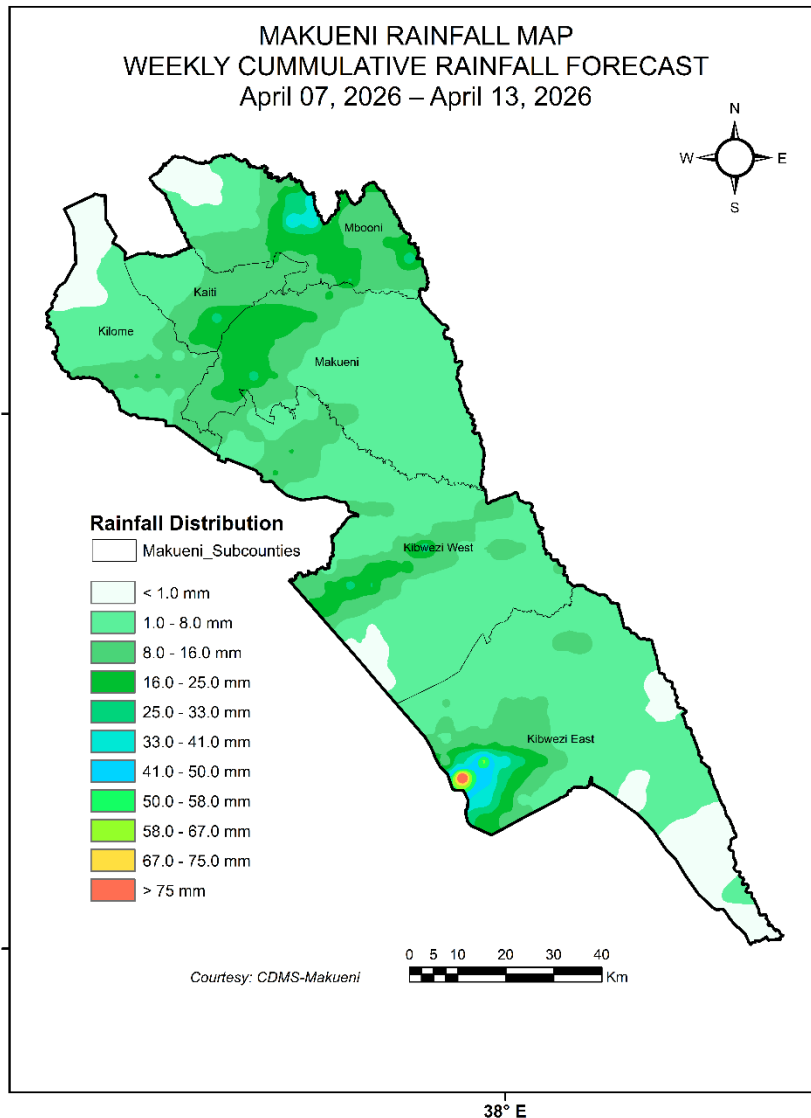

- Sufficient rainfall across most regions
- Temperature gradients driven by topography
- Localized zones of intensified rainfall and heat

This combination reflects a **dynamic atmospheric system**, where moisture availability and thermal conditions interact to define localized climatic behavior across the county

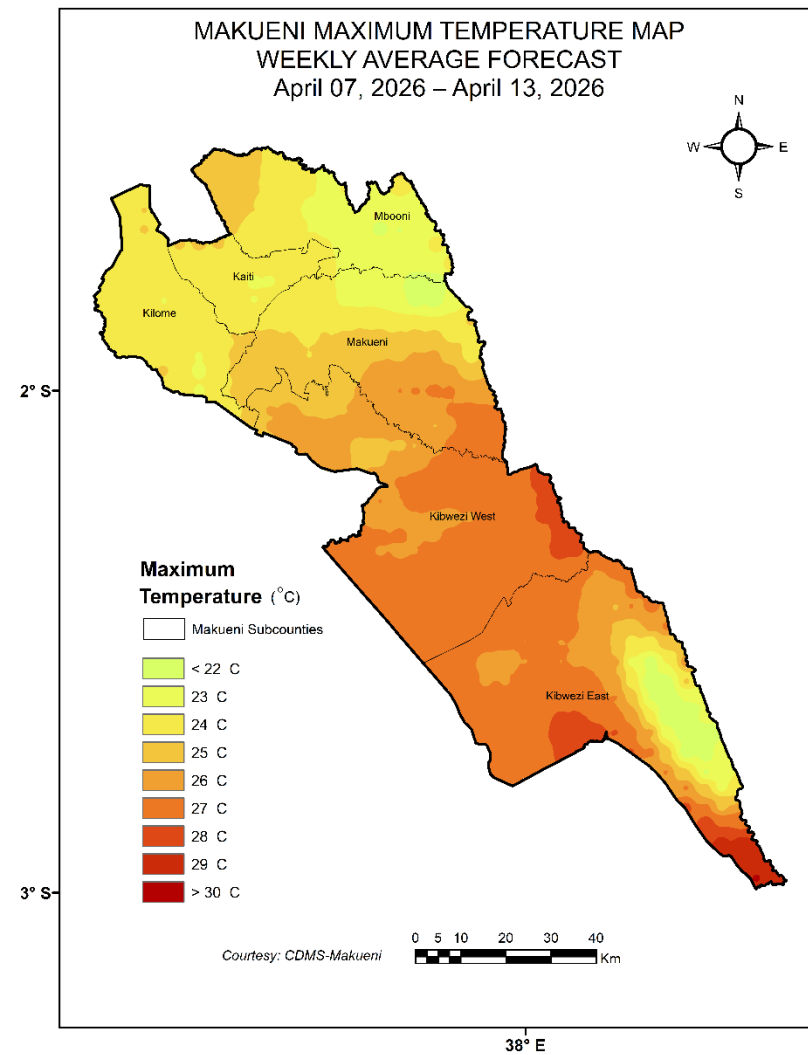

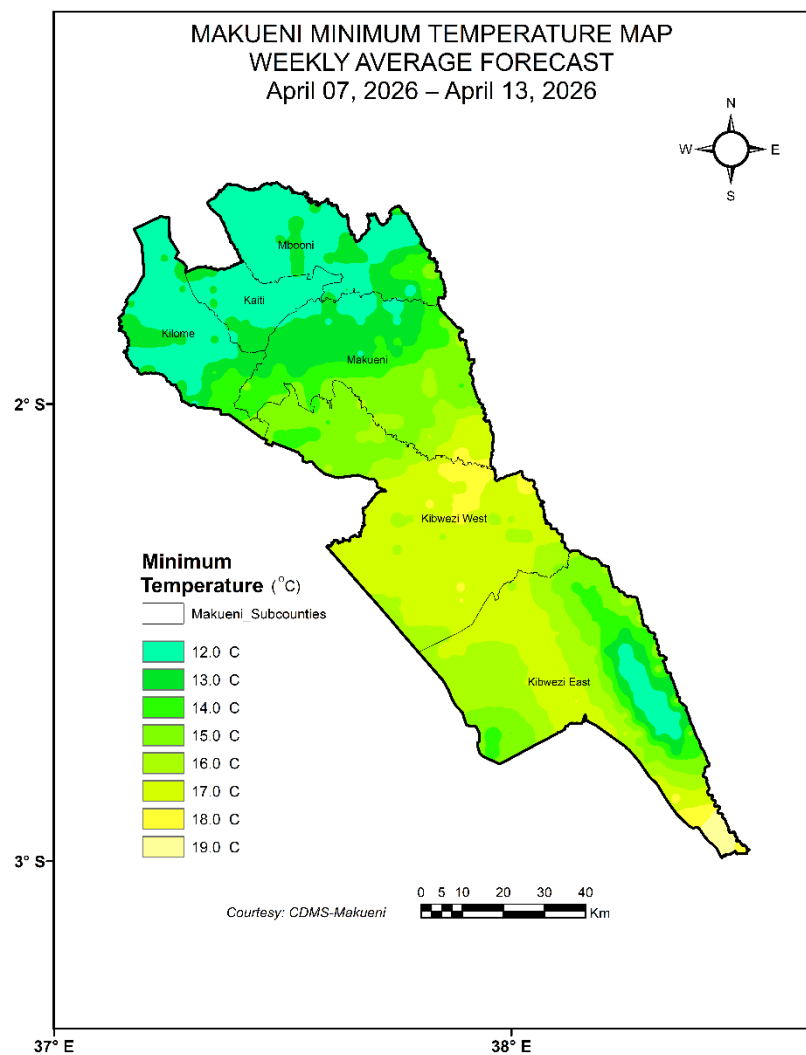

Spatial Distribution Pattern

The rainfall forecast indicates a **moderately active precipitation regime with clear spatial heterogeneity** across the county:

- **Northern Highlands (Mbooni, parts of Kaiti):**
 - Expected rainfall: **16–41 mm**
 - Character: *Moderate to locally enhanced rainfall*
 - Driver: Orographic uplift and moisture convergence
- **Central Belt (Makueni Subcounty):**
 - Expected rainfall: **16–25 mm**
 - Character: *Moderate, fairly uniform distribution*
 - Represents a **transition zone** between highland and lowland systems
- **Western Zones (Kilome):**
 - Expected rainfall: **8–16 mm**
 - Character: *Moderate but relatively lower totals*
- **Southern Lowlands (Kibwezi West & East):**
 - General rainfall: **16–33 mm**
 - **Localized extreme pocket (>75 mm)** in southern Kibwezi East
 - Character: *Convective rainfall with high spatial variability*

Sub-County	Forecast Rainfall Range (mm)	Rainfall Characteristics
Mbooni	16–33 mm (locally 33–41 mm)	Moderately to significantly wet; enhanced by orographic uplift in highland areas
Kaiti	16–25 mm (isolated 25–33 mm)	Moderate and relatively well-distributed rainfall with slight enhancement in central zones
Kilome	8–16 mm (isolated 16–25 mm)	Moderate but comparatively lower rainfall; some localized enhancement in eastern sections
Makueni	16–25 mm (locally 25–33 mm)	Transitional rainfall regime with moderate consistency and spatial variability
Kibwezi West	16–33 mm	Moderate to enhanced rainfall; fairly uniform with pockets of higher accumulation
Kibwezi East	16–33 mm (locally 33–50 mm; isolated >75 mm)	Moderately wet with strong spatial variability; localized intense convective rainfall events

Temperature Summary

Subcounty	Max Temp (°C)	Min Temp (°C)	Remarks
Mbooni	23–25	12–14	Cool to mild days and cool nights; favorable for crop and moisture conservation
Kaiti	24–26	13–15	Mild to warm days with cool nights; stable thermal regime supporting balanced crop development
Kilome	23–25	13–15	Mild daytime temperatures and cool nights; generally stable conditions with minimal thermal stress
Makueni	25–27	15–17	Warm days and mild nights; moderate evapotranspiration with adequate overnight recovery
Kibwezi West	27–29	16–18	Warm to hot days with moderately warm nights; increasing heat load and moderate evapotranspiration
Kibwezi East	28–30+	17–19	Hot days and warm nights; elevated evapotranspiration and sustained thermal stress conditions

Maximum Temperature Categories

Category	Range (°C)	Meaning
<i>Cool</i>	≤25	Mild daytime heat; low stress
<i>Warm</i>	26–29	Comfortable; suitable for activities
<i>Hot</i>	30–33	Intense heat; moderate stress
<i>Very Hot</i>	≥34	Extreme heat; high stress

Minimum Temperature Categories

Category	Range (°C)	Meaning
<i>Cold</i>	≤12	Chilly; frost/dew possible
<i>Cool</i>	13–15	Mild; minimal stress
<i>Mild</i>	16–18	Moderate; favorable for growth
<i>Warm</i>	≥19	Warm nights; limited cooling

The interaction between rainfall and temperature forms a **coupled hydro-thermal system**:

- **Northern Zones:**
 - Moderate–high rainfall + cooler temperatures
→ **Moist and thermally stable environment**
- **Central Zones:**
 - Moderate rainfall + mild temperatures
→ **Balanced climatic conditions**
- **Southern Zones:**
 - Moderate rainfall + high temperatures
→ **Moisture–heat interaction with localized extremes**

The temperature forecast represents a **topography-controlled thermal system**, characterized by:

- Cooler and stable conditions in highlands
- Moderately warm and balanced conditions in central areas
- Hot and thermally stressed conditions in southern lowlands

This classification supports **thermal risk assessment and agro-meteorological planning**, particularly in managing evapotranspiration and crop stress across zones.
