

MINISTRY OF ENVIRONMENT, CLIMATE CHANGE AND FORESTRY

STATE DEPARTMENT FOR ENVIRONMENT AND CLIMATE CHANGE

KENYA METEOROLOGICAL DEPARTMENT

NOTE: Dry day <1mm. Light rains (1-5 mm). Moderate rains (5-20 mm). Heavy rains (20-50 mm). Very Heavy rains > 50 mm.

MAKUENI COUNTY WEEKLY WEATHER FORECAST SUMMARY

Period: May 19, 2026 – May 25, 2026

Rainfall Outlook

Most parts of Makueni County are expected to experience generally light rainfall during the forecast period. The highest rainfall amounts are likely over the northern and highland subcounties of Kaiti, Kilome, and parts of Mbooni, where light to moderate rains are expected.

Makueni Central is likely to receive scattered light showers.

The southern lowland areas, particularly Kibwezi West and most parts of Kibwezi East, are expected to remain largely dry with only isolated light showers in a few locations.

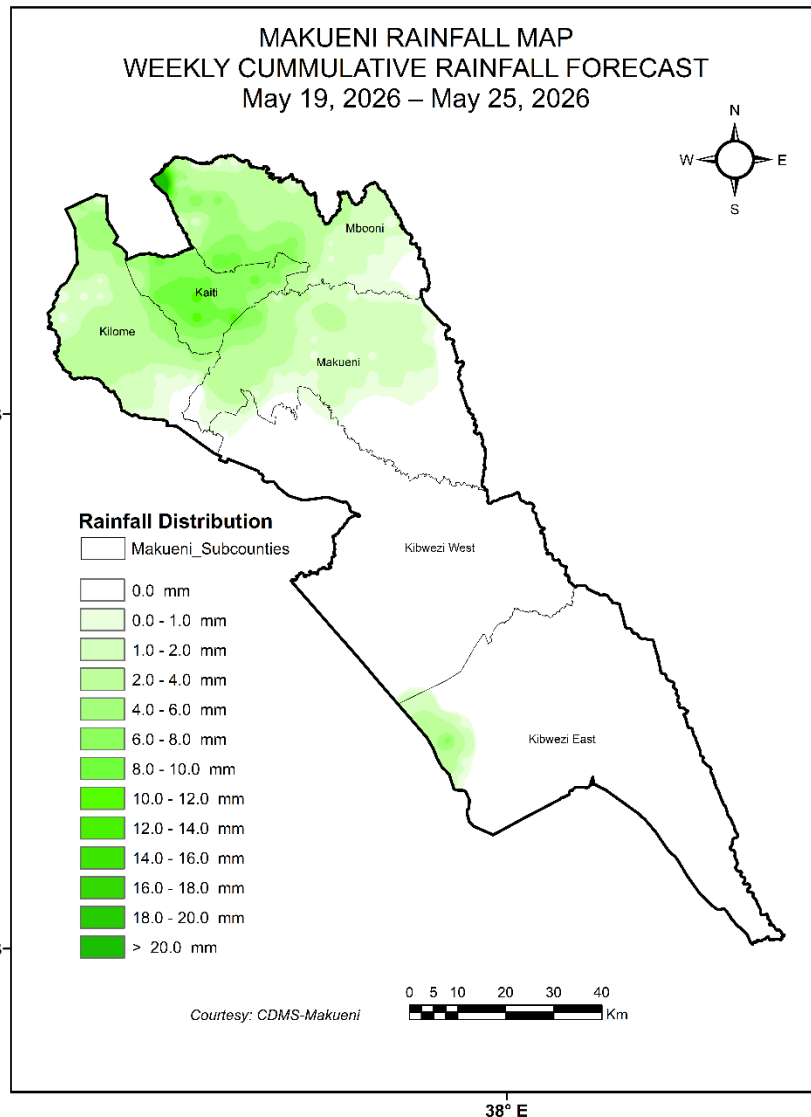

No heavy or very heavy rainfall is expected across the county during the forecast period.

Temperature Outlook

Daytime Temperatures (Maximum)

- Cool conditions are expected over Mbooni, Kilome, and Kaiti, with maximum temperatures ranging between 21°C and 25°C.
- Makueni Central is expected to experience moderate warmth with temperatures between 24°C and 26°C.
- Warmer conditions are expected over Kibwezi West and Kibwezi East, where daytime temperatures are likely to range between 26°C and 29°C.

Night-Time Temperatures (Minimum)

- Cold to cool nights are expected over the highland areas of Mbooni, Kilome, and Kaiti, with minimum temperatures ranging between 12°C and 14°C.
- Mild night-time conditions are expected across Makueni Central, Kibwezi West, and Kibwezi East, with temperatures ranging between 14°C and 17°C.

Spatial Distribution of Rainfall and Temperature

1. Spatial Distribution of Rainfall

The **highest** rainfall amounts are concentrated over:

- Kaiti
- Northern Kilome
- Parts of Mbooni

These areas are expected to receive light to moderate rainfall ranging between approximately 5 mm and 10 mm.

This enhanced rainfall pattern is mainly associated with:

- Higher elevation terrain
- Orographic uplift effects
- Increased cloud development over the highlands

The Kaiti highlands appear to form the primary rainfall core within the county during the forecast period.

A **moderate** reduction in rainfall is expected moving southward into:

- Central Makueni
- Southern Kaiti
- Western Mbooni

These areas are expected to receive mainly light rainfall between 1 mm and 5 mm.

Rainfall in this zone is expected to be:

- Scattered
- Intermittent
- Unevenly distributed spatially

This indicates weakening moisture availability away from the highlands.

The **driest** conditions are expected across:

- Kibwezi West
- Most parts of Kibwezi East

Most areas here are expected to remain dry or receive less than 1 mm of rainfall, with only isolated localized showers.

The southeastern lowlands therefore, represent the county's primary dry zone during the forecast period.

2. Spatial Distribution of Maximum and Minimum Temperature

Maximum temperatures increase progressively from the cooler northern highlands toward the warmer southern lowlands. This creates a clear north-to-south warming gradient across the county. Night-time temperatures also follow a north-to-south warming pattern, although the gradient is less pronounced compared to daytime temperatures.

Cool Highland Zone

The coolest daytime conditions are expected over:

- Mbooni
- Kilome
- Kaiti

Maximum temperatures in these areas range between:

- 21°C and 25°C

These cooler conditions are influenced by:

- Higher elevation
- Increased cloud cover
- Reduced surface heating

The highland belt therefore forms the county's primary cool zone.

Coldest Night-Time Areas

The coolest nights are expected over:

- Mbooni
- Kilome
- Kaiti

Minimum temperatures range between:

- 12°C and 14°C

These areas experience enhanced night-time cooling due to:

- Higher elevations
- Reduced heat retention
- Radiational cooling effects

Transitional Temperature Zone

Moderate daytime temperatures are expected over:

- Central Makueni

Temperatures here range between:

- 24°C and 26°C

This region acts as a climatic transition zone between the cool uplands and warm lowlands.

Moderate Night-Time Conditions

Central Makueni is expected to experience:

- 14°C to 16°C

This represents moderate overnight conditions

Warm Southern Lowlands

The warmest daytime conditions are expected over:

- Kibwezi West
- Kibwezi East

Maximum temperatures range between:

- 26°C and 29°C

The southeastern parts of Kibwezi East show the highest temperatures within the county.

These warmer conditions are associated with:

- Lower elevation
- Reduced cloud cover
- Stronger solar heating
- Drier surface conditions

Warmest Night-Time Areas

The warmest nights are expected across:

- Kibwezi West
- Kibwezi East

Minimum temperatures range between:

- 15°C and 17°C

These warmer nights result from:

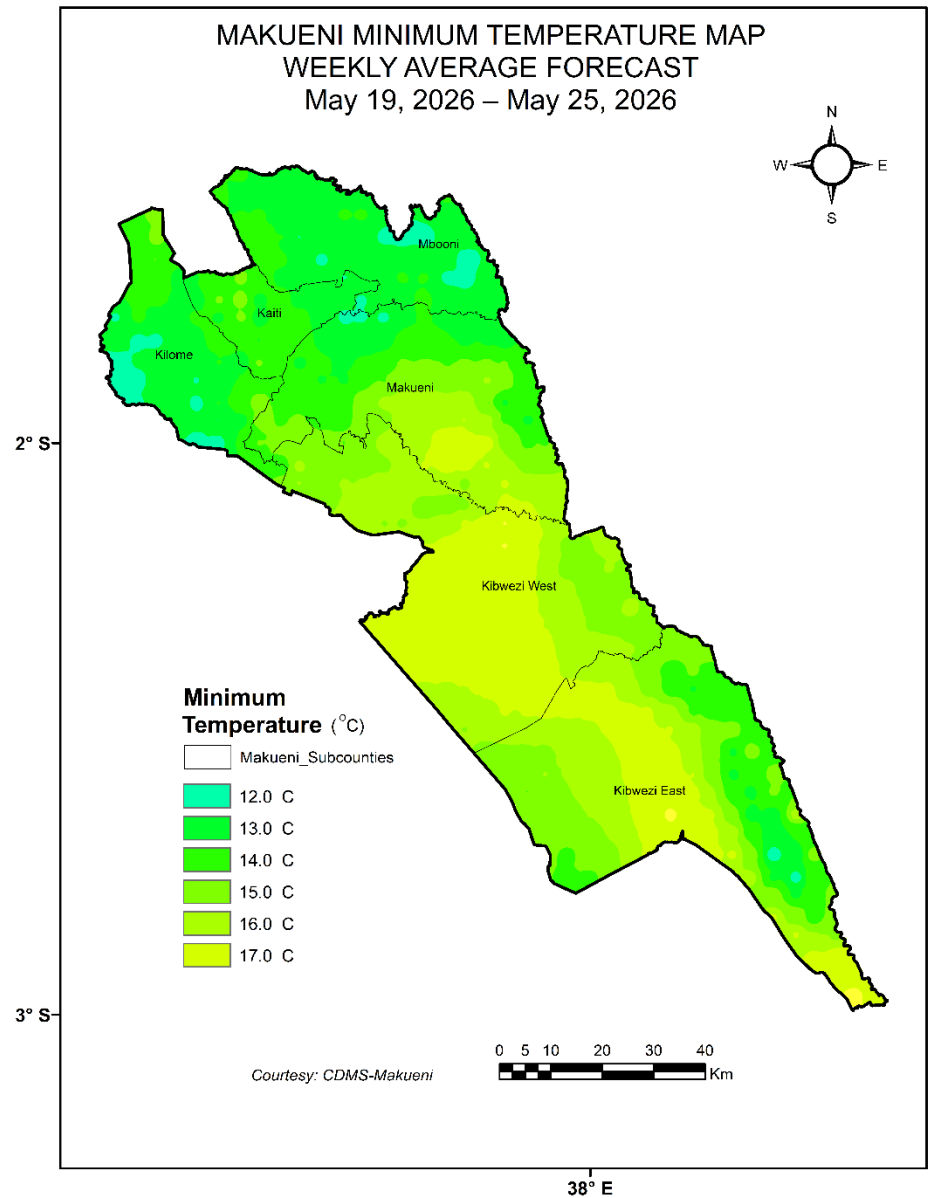

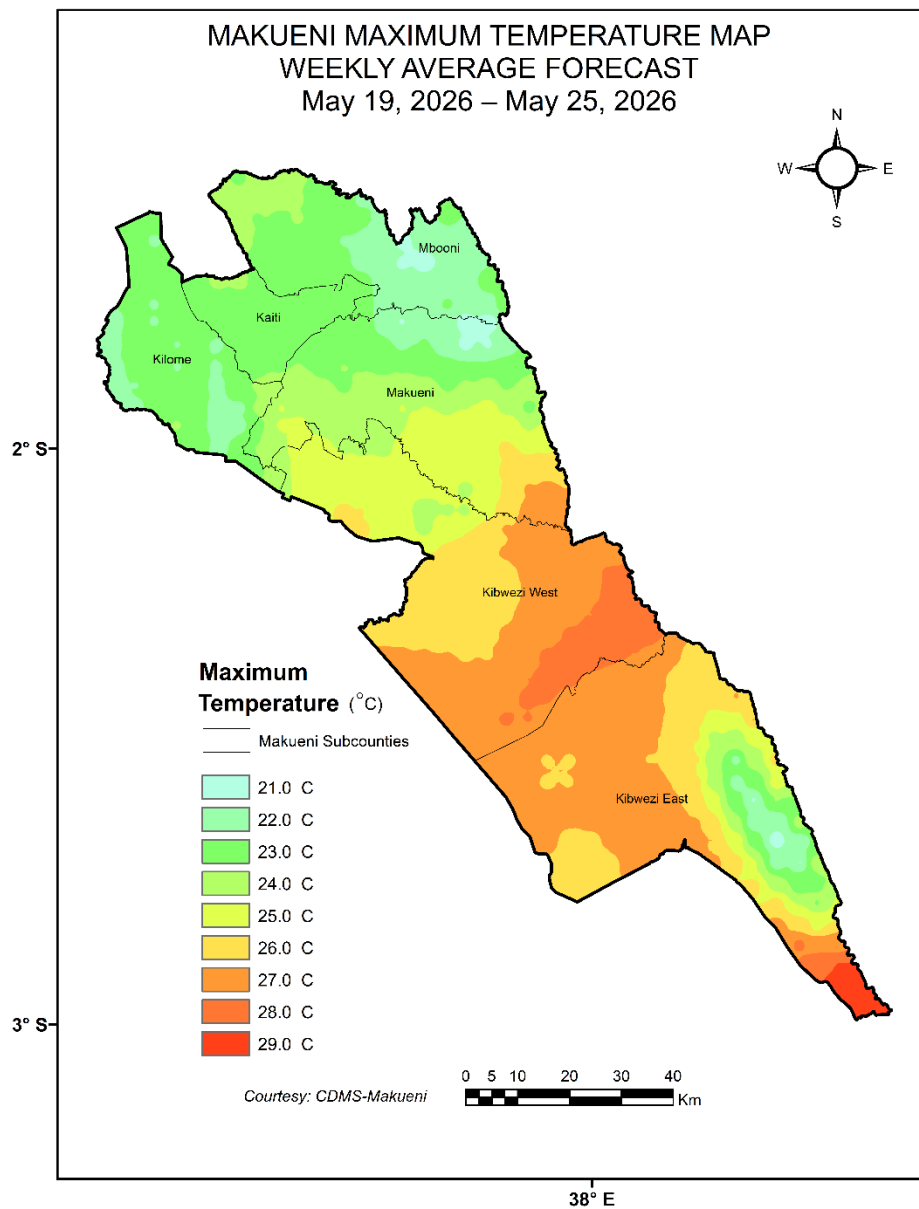

- Greater daytime heat retention
- Lower elevation
- Reduced nocturnal cooling efficiency

Maximum Temperature Categories

Category	Range (°C)	Meaning
Cool	≤25	Mild daytime heat; low stress
Warm	26–29	Comfortable; suitable for activities
Hot	30–33	Intense heat; moderate stress
Very Hot	≥34	Extreme heat; high stress

Minimum Temperature Categories

Category	Range (°C)	Meaning
Cold	≤12	Chilly; frost/dew possible
Cool	13–15	Mild; minimal stress
Mild	16–18	Moderate; favorable for growth
Warm	≥19	Warm nights; limited cooling
