	Chogoria	>20mm	Moderate rain	Moderate rain	Light rain	Moderate rain	Light rain	Light rain	Light rain		

## 1.2 Review for March 2025

The onset of the March-April-May (MAM) "Long Rains" season in the County occurred during the third week of March. Near-to-average rainfall was recorded over several parts of the County. Maximum and minimum temperatures were generally warmer than average over several part of the County.

## 1.3 Outlook for April 2025

The April 2025 rainfall forecast is derived from regression analysis of Sea Surface Temperature Anomalies (SSTAs) and Sea Surface Temperature (SST) gradient. Currently, the Indian Ocean Dipole (IOD) is neutral and weak La Niña conditions are still present.

The forecast indicates that most parts of the County will experience near to above normal rainfall during the month. Temperatures are also likely to be above average over the entire County.

## 1.4 PART II: FURTHER ADVISORIES

### **SUMMARY ABOUT THE WEEKLY FORECAST:**

Morning rains as well as afternoon and night showers and thunderstorms are expected over several places with more intensity in the early days of the forecast period. Maximum temperatures are expected to range from 19°C - 32°C, while minimum temperatures are expected to range from 13°C - 21°C. Strong North easterly to Easterly winds with speeds exceeding 12.5 knots (6.5 m/s) are expected in most parts of the County. *Community members advised to inculcate the culture of being “weather – ready”, “climate – smart” and “water – wise” as we navigate the unfamiliar and chaotic environment of a changing climate. This will help them adapt to a changing climate while at the same time mitigating the adverse effects of Climate Change and Variability, hence becoming more resilient to the vagaries of Climate Change.* In light of this weather forecast, farmers are also advised to consult with respective local extension officers from the County Ministry of Agriculture and Livestock at ward level for more advice on the best farm practices.

**Note: 1 mm of rainfall is equivalent to 1 litre of rainfall per square meter.**

#### KEY OF SCIENTIFIC WORDS USED

Rainfall categories	
Range	Category
<5 mm	Light
5 - 20mm	Moderate
20 - 50mm	Heavy
>50mm	Very heavy
Rainfall coverage	
Term	Meaning
Most Places	Between 66% and 100%
Several Places	Between 33% and 66%
Few Places	Below 33%
<b>Ushauri wa Idara ya Utabiri wa Hali ya Hewa:</b> Mvua za Masika zinaendelea kunyesha karibu sehemu zote za Kaunti ya Tharaka Nithi, kwa hivyo wakulima wanashauriwa waandeleo kupalilia mimea yao na pia kuweka mbolea.
